Bellary, Karnataka

PROFESSIONAL SUMMARY

- BCA Graduate (2026) specializing in Artificial Intelligence, Machine Learning, and Cybersecurity, with hands-on experience building production-grade AI applications including RAG-powered educational platforms, ML-based threat detection systems, and automated security analysis tools. Proven track record developing and deploying 6+ AI projects using Python, LangChain, FAISS, and Groq LLMs with measurable impact including 97% phishing detection accuracy and 2,300+ LinkedIn impressions on launch.
- Active practitioner on TryHackMe and HackTheBox with expertise in SOC analysis, threat intelligence, network security, and ethical hacking. Seeking Software Engineering, AI/ML Engineering, or Cybersecurity Analyst roles to leverage strong Python engineering skills and AI product development experience.

EDUCATION

Bachelor of Computer Applications (BCA) | Nandi Institute of Management and Science, Bellary, Karnataka | 2023 – 2026

CGPA: 7.8

Relevant Coursework: Data Structures, Database Management, Computer Networks, Operating Systems, Python Programming, Machine Learning, Cybersecurity Fundamentals

TECHNICAL SKILLS

Languages: Python (Advanced), R, JavaScript, HTML/CSS, SQL, Bash/Shell Scripting

AI / ML: Scikit-learn, Pandas, NumPy, LangChain, FAISS, SHAP, NLP, RAG (Retrieval-Augmented Generation), Random Forest, Logistic Regression, GridSearchCV

LLM & APIs: Groq API (LLaMA 3.3 70B), OpenAI GPT-4o, Anthropic Claude, HuggingFace Transformers

Frameworks & Tools: Streamlit, Flask, Plotly, Folium, Git/GitHub (Advanced), VS Code, Google Cloud Platform

Cybersecurity: Network Security, SOC & Threat Analysis, Ethical Hacking, Malware Analysis, Cloud Security, TCP/IP, DNS, HTTP, SIEM Fundamentals

PROJECTS

EduSathi | AI / EdTech | Python, Streamlit, LangChain, FAISS, Groq API, RAG

github.com/Not-muzzyy/edusathi

- Architected a production-grade AI-powered study companion using Retrieval-Augmented Generation (RAG) with FAISS vector search and LangChain to enable students to query uploaded PDF study materials with context-aware, grounded responses
- Implemented dual-portal role-based access control (RBAC) with separate Student and Faculty dashboards featuring AI Chat Tutor, adaptive MCQ generation, timed exam simulation, auto-generated flashcards, and PDF progress report export
- Built PDF ingestion pipeline with intelligent parsing, chunking, and embedding storage enabling question paper analysis, knowledge gap detection, and topic summarization for Indian university curriculum

Mini-SIEM AI | Cybersecurity | Python, Streamlit, Scikit-learn, SHAP, Groq LLM

github.com/Not-muzzyy/mini-siem-ai

- Engineered an AI-powered Security Information and Event Management (SIEM) system for SOC-style monitoring featuring ML-based attack classification across 6 threat types with automated risk scoring (0-100)
- Integrated SHAP explainability module providing human-readable reasoning for every threat detection, plus Groq LLM-powered narrative threat assessment generating automated PDF incident reports
- Built real-time Streamlit dashboard with live threat alerts, event timelines, severity classifications, and interactive SHAP visualizations — replicating enterprise SIEM functionality (QRadar, Splunk) using open-source Python

Phishing Detector | Machine Learning | Python, Scikit-learn, Pandas, NumPy, NLP

github.com/Not-muzzyy/phishing-detector-advanced

- Developed a 3-layer ML phishing detection pipeline achieving 97% accuracy for English, Hindi, and Hinglish content — combining NLP text analysis, URL intelligence, and meta-ensemble classification with zero hardcoded rules
- Extracted 20+ URL-based features (domain age, HTTPS usage, special character patterns) and evaluated Random Forest, Logistic Regression, and ensemble methods using confusion matrix, precision-recall, and ROC-AUC metrics
- Launched publicly on LinkedIn generating 2,378 impressions and positive feedback from cybersecurity professionals; deployed as interactive Streamlit app with real-time URL risk scoring

Virtual Pollution Intelligence Grid | Data Visualization / AI | Python, Folium, Plotly, Streamlit

github.com/Not-muzzyy/virtual-pollution-intelligence-grid

- Architected an interactive geospatial pollution monitoring dashboard with AI-powered 7-day environmental risk forecasting, spatial spread modeling, and anomaly detection across multiple geographic regions
- Integrated Folium maps with real-time data overlays and Plotly time-series charts for pollution trend analysis; built in 24 hours at Chakravyuha 3.0 Hackathon (Feb 2026) and presented to judges from BITM, Bellary

HACKATHONS & COMPETITIONS

- **Chakravyuha 3.0 – Tech Spectra Hackathon** — Dept. of MCA, BITM Bellary | Feb 2026 | Built Virtual Pollution Intelligence Grid — geospatial AI dashboard for pollution forecasting with anomaly detection
- **Brains & Bytes 2025 Hackathon** — Dept. of CSE, RYMEC Ballari | Sept 2025 | Presented TodoList AI — intelligent task management app with ML-powered priority classification; demonstrated to 50+ attendees

CERTIFICATIONS

- **Google Cloud Cybersecurity Certificate** — Google (2024)
- **AI Agents Fundamentals** — HuggingFace (2025)
- **AI Fluency** — Anthropic (2025)
- **Claude 101** — Anthropic (2025)
- **Claude Code** — Anthropic (2025)

PRACTICE & LEARNING PLATFORMS

- TryHackMe & HackTheBox — Cybersecurity labs, pentesting practice, CTF-style challenges, SOC analyst simulations
- LeetCode — Data structures and algorithms in Python
- Kaggle — Machine learning competitions, datasets, and notebooks
- Google Skills Boost — Cloud infrastructure, AI/ML training paths

LANGUAGES

English — Read, Write, Speak | Hindi — Read, Write, Speak | Kannada — Read, Write, Speak

AREAS OF INTEREST

Software Engineering | Artificial Intelligence & LLMs | Cybersecurity (SOC, Threat Intelligence, Ethical Hacking) | Cloud Computing | AI Product Development
